

Flipped & Blended Learning

Tracy Sockalosky
Transforming with Technology
Summer 2013

Concept Not New

- Teachers have been “blending learning” for years.
- Prior to technology integration, blended learning was based in multisensory instruction.

Now we have video!

A new horizon of possibility...

- Access to greater resources
- Exponential increase in ease & ability to create resources
- Barriers to access for many has been removed

Deliver & Demonstrate

- Blending not only for delivery of instruction but also for students to demonstrate understanding.
- Teachers can almost fully remove themselves from the process allowing students to fully create, analyze, collaborate & evaluate

Teachers can be a “guide on the side.”

In terms of differentiation...

- It is now possible to do!
- Ease of access without stigmas attached.
- No more creating from scratch.
- Students developing new skill-sets.

Screencasting

- Both a teaching and a learning tool.
- Very easy to do for all ages, at all ability levels.
- Software ranges from free to quite pricey.
- iPads make it even easier.

Screencasting Tools

Mac and/or PC:

QuickTime

Jing®
